# JIRA & GITHUB FEEDBACK

Group Number: 5
Date: 02/04/24
TA Assessing: Rimsha Rizvi

In general, your GitHub seems to be actively used and has submissions posted exactly where they belong, which is great. It also follows the naming conventions required for this class. For the following weeks, please make sure that all documents are submitted on time and that all members actively participate in GitHub submissions/commits.

For Jira, there seems to have been some effort made. There are items in the backlog which is crucial, so that is good. For the following weeks, please implement the following changes to Jira as it would affect your grade in the future:

- Currently, only 2 members of the group have assigned themselves to a task. Moving forward, please ensure every member has assigned themselves to a task.
- Each sprint should have stories inside of them. Not tasks. If you want, you can add sub-tasks to each story once it is created.

- Assign story points to each story. This is the "estimate" tab when you create a story.
- Tasks need to have changed states (from "To Do" to "In Progress" to "Done") as the week progresses. This does not mean that each task needs to be completed by the end of the week as it is highly dependent on your group's progress. But use that as a reference to see how many stories your group can complete within a week for when you are creating new sprints.
